The World's Writing Systems: A XeLaTeX document showing typesetting in a variety of writing systems

Jake Warde

August 12, 2013

Sections 1-5 show examples of in different writing systems. The sections are organized according to recognized categories of writing systems. The XeTex Companion (Section 3.1.3) contains an overview of types of writing systems.¹ Another recommended resource on writing systems is *Omniglot: The online encycloppedia of writing systems and languages*² Sections 6-7 are a sum-mary of the technologies used to typeset text for all the world's langagues. The document may also be a resource to someone learning to use XeLatex. XeLatex source is here: myprojectnotebook.com. No claims to being a XeLatex expert are made. In fact the document was created while learning to use XeLatex.

1 Abjads-Consonant Alphabets

Abjads, or consonant alphabets, represent consonants only, or consonants plus some vowels. Full vowel indication (vocalisation) can be added, usually by means of diacritics, but this is not usualy done. Most of abjads, with the exception of Ugaritic, are written from right to left. There are three abjads currently in use: Arabic, Hebrew and Syriac. Abjads, or consonant alphabets, represent consonants only, or consonants plus some vowels. For more about abjads visit: http://www.omniglot.com/writing/alphabetic.htm

1.1 Arabic

عَلَى يَعْمَلَ وَأَنْ الوَطَنِ شَأْنِ إِلَمُكِ فِي جُمْدٍ كُلَّ يَبْخُلَ وَأَنْ وَجِيْرَانِهِ أَصْلِهِ وَمَعَ نَفْسِهِ مَعَ وَحَادِقاً أَمِيْنَاً يَكُونَ أَن الإنْسَانِ عَلَى يَهِبِمُ التَّضْعَدية مِنَّانُ إِلا خَلِكَ لَهُ يَبَعَ وَلَن . لِلنَّاسِ السَّعَادَة يَبْلِبِمُ مَا

1.2 Hebrew

רב־לשוני. ובמחשוב טקסט בפריסת בגופנים, וביישומים, הפעלה

Note: The web page from which the above text was copied provides information about the characteristics of the script used to write Hebrew. http://rishida.net/scripts/samples/hebrew

1.3 Syriac

העומעם הישא האיזאייזטאט האיזאטייש האטוישהט עייעש

1.4 Phoenician

The Phoenician alphabet, called by convention the Proto-Canaanite alphabet for inscriptions older than around 1200 BCE, is also an abjad. It was used for the writing of Phoenician, a Northern Semitic language, used by the civilization of Phoenicia.

Phoenician became one of the most widely used writing systems, spread by Phoenician merchants across the Mediterranean world, where it was assimilated by many other cultures and evolved. The Aramaic alphabet, a modified form of Phoenician, was the ancestor of modern Arabic script, while Hebrew script is a stylistic variant of the Aramaic script. The Greek alphabet (and by extension its descendants such as the Latin, the Cyrillic and the Coptic), was a direct successor of Phoenician, though certain letter values were changed to represent vowels.³

Note: Finding some Phoenican text ready for cut-and-paste into this document was a little difficult (as one might imagine). But in figuring out how to input Phoenician text I discovered an excellent tool for entering any Unicode-encoded symbol into a computer. Learn more about *BabelPad* at http://www.babelstone.co.uk/index.html

2 Alphabets

Alphabets, or phonemic alphabets, are sets of letters, usually arranged in a fixed order, each of which represents one or more phonemes, both consonants and vowels, in the language they are used to write. In some cases combinations of letters are used to represent single phonemes, as in the English sh, ch and th. For a history of alphabets, lists of alphabets currently in use, alphabets used to a limited extent, and alphabets that are no longer used visit: http://www.omniglot.com/writing/alphabets.htm.

Most specialists believe that the Phoenician alphabet, an abjad, was adopted for Greek during the early 8th century BC, perhaps in Euboea. The earliest known fragmentary Greek inscriptions date from this time, 770–750 BC⁴, and they match Phoenician letter forms of c. 800-750 BC.⁵. The innovation of the Greek writing system was that symbols were used to represent vowels. The inroduction of vowels into the script (vocalization) "and the abstraction of consonants as a process in speech – meant that the number of signs (or characters) actually used to represent spoken language could be reduced to a relative handful (around 30) because even in complex languages, such as some Inuit dialects, the number of actual consonantal and vocal sounds is finite. http://people.ucalgary.ca/~mwolfe/Syllabary,alphabet.html

2.1 Greek

μῆνιν ἄειδε θεὰ Πηληίἄδεω Ἀχιλῆος οὐλομένην, ἡ μυρί' Ἀχαιοῖς ἄλγε' ἔθηκε, πολλὰς δ' ἰφθίμους ψυχὰς Ἄίδι προΐαψεν ἡρώων, αὐτοὺς δὲ ἑλώρια τεῦχε κύνεσσιν οἰωνοῖσί τε πᾶσι, Διὸς δ' ἐτελείετο βουλή, ἐξ οὖ δὴ τὰ πρῶτα διαστήτην ἐρίσαντε Ἀτρείδης τε ἄναξ ἀνδρῶν καὶ δῖος Ἀχιλλεύς. τίς τ' ἄρ σφωε θεῶν ἔριδι ζυνέηκε μάχεσθαι;

2.2 Cryllic Script Languages

В этой статье рассматриваются две конструкции современного русского языка: конструкция идентификации с существительным в именительном падеже (NomC) и сравнительная конструкция с существительным в творительном падеже (InsC). Эти две конструкции рассматриваются в условиях, когда они максимально сближаются: в контексте связки быть. Материал Национального корпуса русского языка показывает, что, вопреки встречающимся в литературе утверждениям, NomC все еще частотна в современном русском языке. Хотя процент InsC и возрастает, тем не менее распределение NomC и InsC до и после 1950 г. изменилось не очень сильно. В работе показывается, что распределение двух конструкций зависит от грамматической формы глагола. При употреблении связки настоящего времени используется исключительно NomC, в то время как при употреблении связки прошедшего и будущего времени превалирует конструкция InsC. Для разных именных групп распределение употреблений NomC и InsC различается. Процент NomC больше для тех именных групп, которые по своей семантике удовлетворяют требованиям NomC, а процент InsC больше у тех именных групп, которые по своей семантике удовлетворяют требованиям InsC.⁶

3 Syllabic Alphabets

Syllabic alphabets, alphasyllabaries or abugidas consist of symbols for consonants and vowels. The consonants each have an inherent vowel which can be changed to another vowel or muted by means of diacritics. Vowels can also be written with separate letters when they occur at the beginning of a word or on their own.

When two or more consonants occur together, special conjunct symbols are often used which add the essential parts of first letter or letters in the sequence to the final letter. Sample syllabic alphabest are shown at: http://www.omniglot.com/ writing/syllabic.htm. Two syllabic alphabets are shown.

3.1 Devanāgarī

Devanagari, also called Nagari (Nāgarī, the name of its parent writing system, is an abugida alphabet of India and Nepal. Because of its use to write the Hindi language, devanagari is one of the most used and adopted writing systems in the world. The use of the name devanāgarī is relatively recent, and the older term nāgarī is still common. The rapid spread of the term devanāgarī may be related to the almost exclusive use of this script to publish sacred Sanskrit texts. This has led to such a close connection between

⁶Sample text from: Kuznetzova,J;Diachronic distribution of predicate nouns in Russian: Russian Lingusitics 2013 http://link.springer.com/article/10.1007/s11185-012-9107-1

devanagari and Sanskrit that devanagari is now widely thought to be the Sanskrit script; however, before the colonial period there was no standard script for Sanskrit, which was written in whatever script was familiar to the local populace.⁷

संस्कृतम् जालपत्रे सुश्वागतम्

संस्कृतभाषा भारतीय परम्परा तथा वृधेः आधारः । अस्माकं वृधेः, परम्परा, जीवनमुल्यवोध नमितिं प्रतदिनि जीवने संस्कृतभाषायाः आवश्यकम् अस्ति। वेदः, रामायणं, महाभारतं, श्रीमद्भग्वद्गीता आदधिर्मग्रन्थाः संस्कृतभाषायां लखितिम् । इमे ग्रन्थाः नसिन्देह अन्यग्रन्थाणाम् अपेक्षा महतरं भवन्ती।

संस्कृतभाषा दशसहस्र वर्षादप पूरातनम् । सहस्रवर्षव्याप इयं भाषा अस्माकं कथतिभाषा आसीत् । इयं संस्कृभाषा सर्वभाषाणां जननी अप भिवत । कथं इयं मुख्यभाषा तथा महत्वपूर्ण भवत सिा स्वयम् कथयत । यदा अस्माकं भाषाज्ञानम् भवष्यित तिदा वयम् अस्माकं भाषायाः परमुपरायाः गुरन्थाणां च पुरशंशा तथा जुञानतुं समर्थाः भवषियामः ।

अतः आगच्छन्तु प्रतदिनि-जीवने वयं शुद्धं संस्कृतं कथयष्यामः ।

3.2 Bengali

The Bengali alphabet is the writing system for the Bengali language. The script with variations is shared by Assamese and is basis for Meitei, Bishnupriya Manipuri, Kokborok, Garo and Mundari alphabets. All these languages are spoken in the eastern region of South Asia. Historically, the script has also been used to write the Sanskrit language in the same region. It is written from left to right and lacks distinct letter cases. It is recognizable by a distinctive horizontal line running along the tops of the letters that links them together, a property it shares with two other popular Indian scripts: Devanagari (used for Hindi, Marathi and Nepali) and Gurumukhi (used for Punjabi). The Bengali script is, however, less blocky and presents a more sinuous shape. Because of the large population of literate Bengali speakers, Bengali script is also one of the more widely used writing systems in the world.

ধারা ১: সমস্ত মানুষ স্বাধীনভাব সেমান মর্যাদা এবং অধকিার নযি জেন্মগ্রহণ কর।ে তাঁদরে ববিকে এবং বুদ্ধ আছ;ে সুতরাং সকলরেই এক েঅপররে প্রত ভিরাতৃত্বসুলভ মন্ব চ্চাব নযি আচরণ করা উচৎি।

Note: The sample text in Bengali is from *WikiTravel: The Free Travel Guide* ttp: //wikitravel.org/en/Bengali_prasebook. The text is Article 1 of the Universal Declaration of Human Rights (by the United Nations): Article 1: All human beings

⁷http://en.wikipedia.org/wiki/Devanagari

are born free and equal in dignity and rights. They are endowed with reason and conscience. Therefore, they should act towards one another in a spirit of brotherhood.

4 Syllabaries

A syllabary is a phonetic writing system consisting of symbols representing syllables. A syllable is often made up of a consonant plus a vowel or a single vowel. In a true syllabary there is no systematic graphic similarity between characters that share a common consonant or vo wel sound. That is, the characters for 'ke', 'ka', and 'ko' have no similarity to indicate their common "k" sound (e.g. hiragana $\tau \pi \exists$).⁸

4.1 The Cherokee Syllabary

The Cherokee syllabary is a syllabary invented by Sequoyah, also known as George Gist, to write the Cherokee language in the late 1810s and early 182 0s. His creation of the syllabary is particularly noteworthy in that he could not previously read any script. He first experimented with logograms, but his system later developed into a syllabary. In his system, each symbol represents a syllable rather than a single phoneme; the 85 (originally 86)[1] characters in the Cherokee syllabary provide a suitable method to write Cherokee. Some symbols do resemble the Latin, Greek and even the Cyrillic scripts' letters, but the sounds are completely different (for example, the sound /a/ is written with a letter that resembles Latin D). Each of the characters represents one syllable.

5 Semanto-Phonetic Writing Systems

Semanto-phonetic writing systems often represent both sound and meaning. As a result, these scripts generally include a large number of symbols: anything from several hundred to tens of thousands. In fact there is no theoretical upper limit to the number of

⁸http://en.wikipedia.org/wiki/Syllabary

symbols in some scripts, such as Chinese. These scripts could also be called logophonetic, morphophonemic, logographic or logosyllabic. Two semanto-phonetic scrips are currently in use, namely Chinese and Japanese (Nihongo). For more on semantophonetic writing systems visit: ttp://www.omniglot.com/writing/semanto-ponetic.php

6 Technologies used to set the type in the worlds writing systems

6.1 Overview of Technical Issues in Supporting Scripts

This section is based on a discussion of technical challenges in typesetting the worlds scripts presented by SIL International http://scripts.sil.org

"There are a number of challenges in the typesetting of non-Roman scripts. These include problems of interaction between the font and typesetting system, problems of very large character sets, and considerations of typesetting the particular script. Happily, the advent of new computer technology has considerably lessened some of these problems."
